Acid Plant Inspection Services

Equipment inspection is a critical part of every shutdown - ***what is more critical is knowing what to look for...*** Xstrata has been operating acid plants for over 40 years. We have extensive experience with numerous acid plants of various designs and the know-how to keep your plant running. Our annual inspection program is proven to increase plant availability, extend asset life and reduce maintenance costs.

During the plant shutdown, we become an integral part of the shutdown team, not only providing comprehensive inspection services, but also transferring maintenance and technical expertise obtained from knowledge acquired through working at numerous other operations. Presenting daily inspection updates and recommendations are a key component of our service. Following through on these recommendations by providing detailed repair procedures and quality control on these repairs is what separates us from the competition.

We also offer clients a wide range of other services, including:

- Materials Testing for Corrosion, Wear and Structural Applications
- Materials Selection, including metals, ceramics, plastics, coatings & linings
- Fabrication Specifications
- Quality Assurance in Fabrication
- Inspection and Evaluation of In-service Plant Equipment
- Root Cause Failure Investigations

We have extensive field experience in mining and process plant equipment, such as Smelters, Leaching Plants, Refineries, Acid Plants and Concentrators. Services are provided in English, French, Portuguese and Spanish. Contact us for further details...
